Summary

Engineering Manager with 10+ years of experience leading cross-functional teams to build scalable, high-quality software solutions in regulated, high-impact industries. Proven ability to mentor engineers through servant leadership, improve team performance, and deliver projects aligned with business goals through strong stakeholder and team collaboration.

Core Competencies

Engineering Leadership & People Management

Servant leadership, coaching and mentoring, performance management, career development, hiring and team scaling

Technical Strategy & Architecture

Scalable system design, modernization of legacy systems, microservices architecture, high-availability and resilient systems, Event Driven Architecture

Agile Delivery & Execution

Scrum, Kanban, Scrumban, delivery forecasting, velocity and quality metrics, continuous improvement

Cross-Functional Collaboration

Product, UX, QA, SRE, Data, and Executive stakeholder partnership; roadmap planning and alignment

Operational Excellence & Reliability

Incident management, on-call leadership, monitoring and alerting, SLA/SLO ownership, production readiness

Quality Engineering & SDLC

Test automation, TDD, CI/CD practices, defect reduction, release management, and risk mitigation

Security & Compliance

Vulnerability management, monitoring and alerting reviews, regulated environment delivery, audit readiness

Data-Driven Decision Making

Delivery dashboards, KPI tracking, root cause analysis

Business Impact & Delivery Management

Budgeting and resourcing, prioritization, cost/benefit analysis, outcome-focused execution

Stakeholder Communication

Executive-level communication, technical translation, expectation management, and consensus building

Technical Skills

Programming Languages & Frameworks

C#, Javascript, SQL, Python (basic), Java, .NET Core, React

Architecture & Implementation Patterns

RESTful API design, Microservices implementation, Event Driven Architecture, SOLID principles, Test-driven development (TDD)

Testing & Quality Tooling

Selenium, Cypress, Playwright, UI Test Automation, Jest, XUnit, NUnit, Moq

Cloud & Infrastructure

Azure App Services, Azure Functions, Azure Key Vault

DevOps, Monitoring & Reliability Tools

Azure Application Insights, Sumologic, Serilog, PagerDuty, Github Actions, Octopus Deploy, Jenkins

Professional Experience

Willis Towers Watson

April 2017 - Present

Engineering Manager | November 2019 – Present

Lead cross-functional teams of Developers, QA/SDETs, UX Specialist, Product Management, Site Reliability, and Data Analysts in delivering high-impact technology solutions in the Medicare Marketplace.

- Lead team growth by hiring and onboarding nine professionals across Engineering, Product, UX, and Infrastructure functions.
- Championed a servant leadership approach, building a team culture rooted in trust, autonomy, and career growth; Successfully coached an underperforming team member to a senior level promotion over the course of 4 years, while guiding multiple others to successful career advancements.
- Delivered multiple successful projects on time and within budget including:
 - Standardized user profiles across the website and call center interfaces by performing gap analysis and providing technical direction; the updated interface is now adopted by 1,350 call center agents.
 - Improved the conversion rate for Underwritten Medigap applications from 75% to over 90% by identifying common data points and patterns across 50+ application variations and providing technical guidance for a new pre-screening process.
 - Modernized a legacy codebase handling all website participant data. Established a formal vulnerability and monitoring review process reducing open security alerts from 527 to 0 and high urgency Pager Duty alerts from 240 in a rolling 6 month period to an average of less than 10.
- Facilitated user acceptance testing with agents and end users to drive adoption and ensure products met acceptance criteria, reducing incidents on production go-live to 0.
- Created delivery dashboards for teams in excel and powerBI to track velocity, quality, and delivery. Drove a 10% increase in velocity, and 40% decrease in reported production bugs.
- Collaborated with development teams and stakeholders on roadmap planning, providing effort estimates and feasibility input to executive leadership.
- Guided team process using Scrumban, with the flexibility to operate full Scrum ceremonies when project cadence or team preference required. Led all ceremonies when required due to team member absence.
- Acted as a stabilizing force during five consecutive Annual Enrollment Periods (AEPs), leading incident management and ensuring compliance to 99.9% uptime SLAs; Receiving accolades from senior level leadership.

Software Engineer | April 2017 – November 2019

- Led two major projects, acting as the accountable owner for end-to-end delivery, cross-functional coordination, and team alignment; communicating and overseeing the work of 5 individual contributors.
- Mentored QA and junior developers in coding standards, test automation, and agile best practices; co-authored test suites with QA staff improving test coverage by 60%.

Performance Matters

March 2013 - April 2017

Software Engineer | June 2014 – April 2017

Delivered high-quality code in C# and JavaScript for education-sector platforms, including performance tracking and evaluation tools.

Quality Assurance Engineer | March 2013 – June 2014

Developed 50+ automated UI test cases using Selenium in C#, improving regression testing efficiency and reducing manual QA workload.

Education

Westminster College

Graduated May 2014

Bachelor of Science, Computer Science
